

TURDLE

Chang He & Reema Vanwari

OUR TEAM

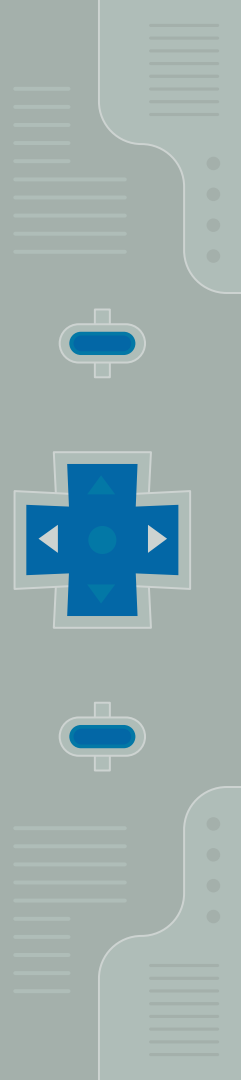

**REEMA
VANWARI**

Only senior in the class thus
forced to present first

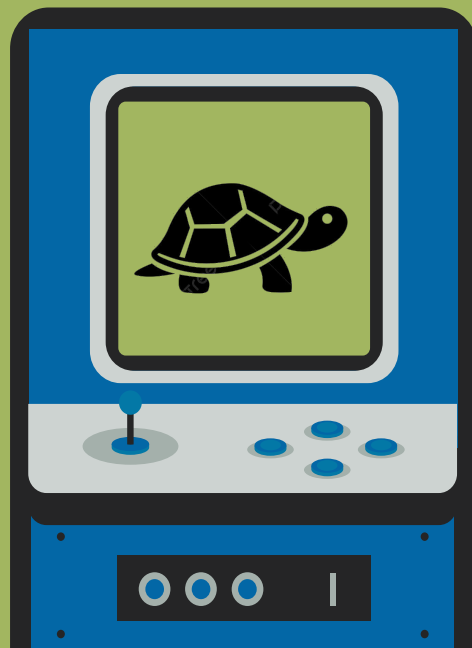

CHANG HE

Is always absent because
she's either sick or
travelling for badminton

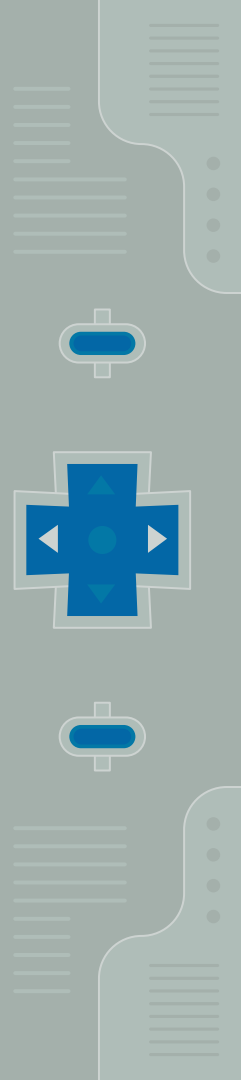

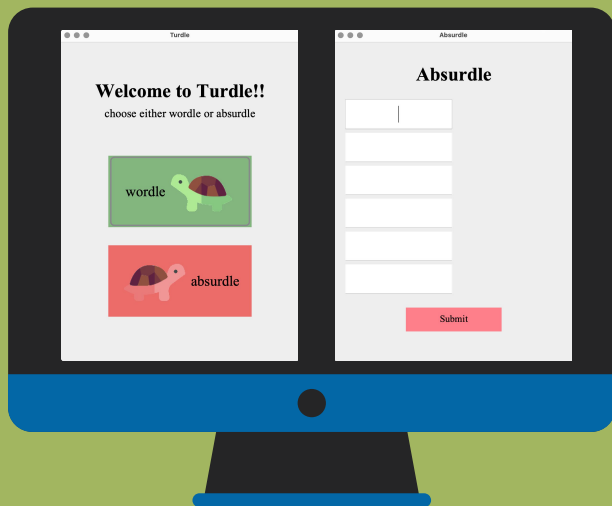

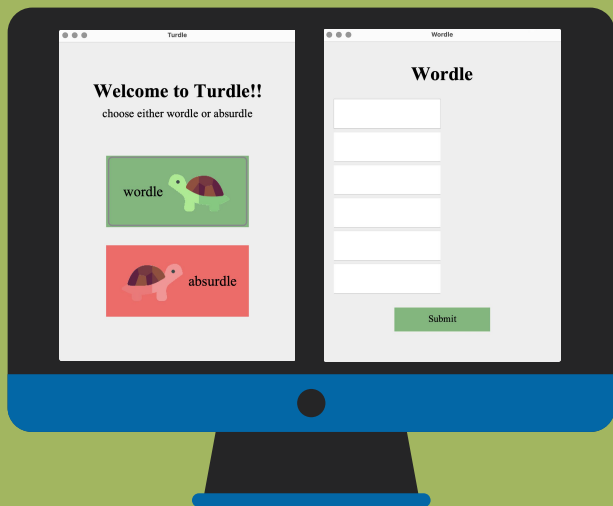

ABOUT THE PROJECT

- Players have the option to choose between two games
 - Wordle: recreation of NY Times Wordle (hard version)
 - Absurdle: trying not to guess the word
- Turtle themed
- Both of us worked on planning/testing/coding

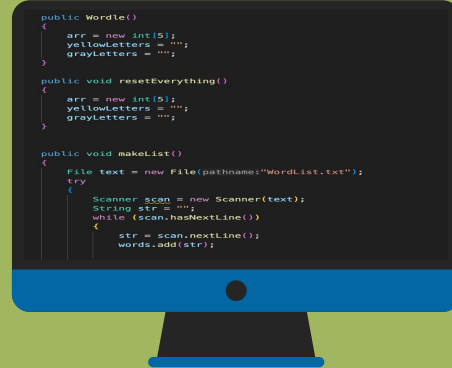

DEMONSTRATION

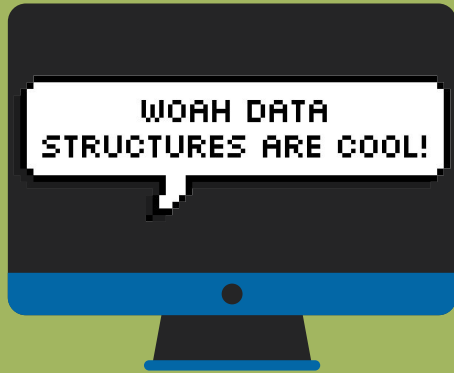

CLASS STRUCTURE

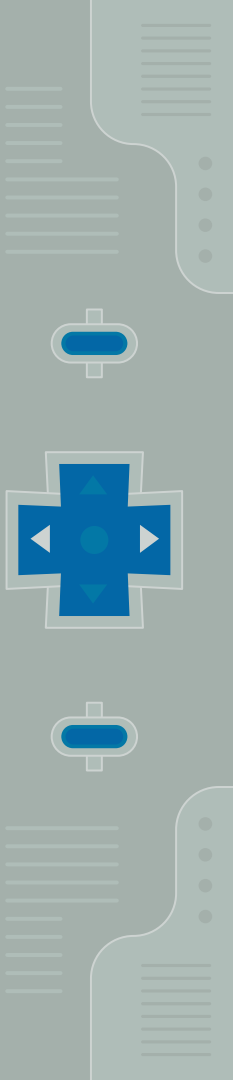

- Turdle
 - Main class - creates the home screen GUI
- Wordle
 - makeList(), chooseWord(), readGuess(String g), validGuess(), resetEverything(), getter/helper methods
- Absurdle
 - extends Wordle
- Display Absurdle/Wordle
 - GUI for both games

DATA STRUCTURES

- HashSet used to store list of all five letter words
 - used for random word selection from wordList txt file
 - $O(1)$ time to check if a guess is in the list

KEY ALGORITHMS

setColors()

- return type: void
- determines the color of each letter in a guess
- modifies an array of length 5
- gray: 0, yellow: 1, green: 2

validGuess()

- return type: boolean
- checks that guesses are valid
- must be a real 5 letter word
- previously revealed hints are used in subsequent guesses

DEVELOPMENT PROCESS

PLANNING

- 1.5 weeks for planning
- Planned in detail!

CODING

- ~2 weeks coding
- Struggled with GUI

DEBUGGING

- Many many stupid syntax errors
- Extra () at top of class (took us, Fulk & Kwong a total of 30 minutes to find this mistake 😊)
- Extra semicolon in if statement (another 30 minutes of testing for us to realize..)

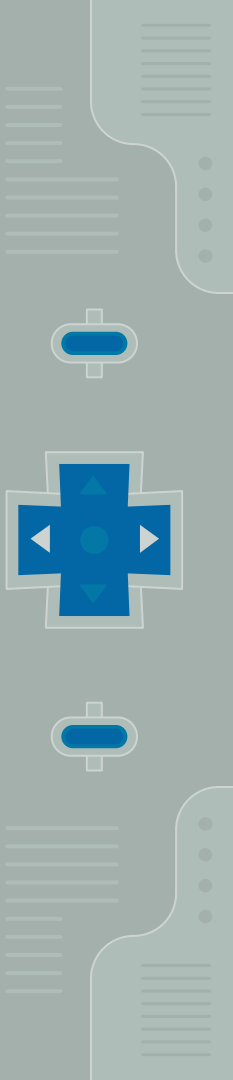

WHAT WENT...

WELL :)

- Worked well together
- Pretty good GUI for newbies (in our humble opinions)
- Logic was planned well
 - Considered several special cases

NOT WELL :(

- Not much time to collaborate
- Struggled with GUI at first
- Issues with setColors method
 - Knew the problem but had difficulty fixing it

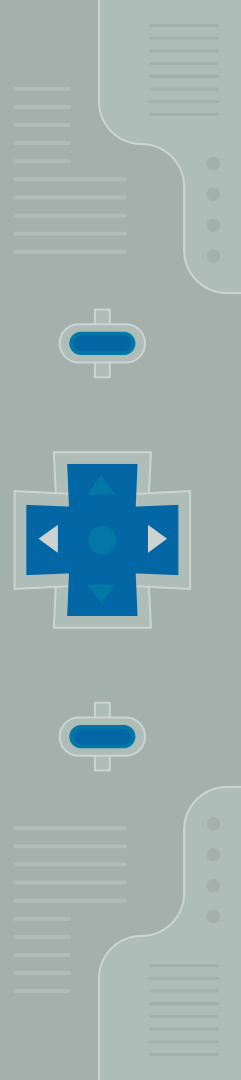

WHAT WE WOULD CHANGE

- Choose from a filtered word list
 - Remove vulgar, weird, plural words
 - pssst , ahhhh were words in list
- Improve the GUI for a better user experience
 - Try adding a grid and keyboard to resemble NY Times wordle
- Give Absurdle an infinite amount of attempts (like original game)

QUOTES FROM FRIENDS

“Is it called Turdle
because it’s poop
themed?”

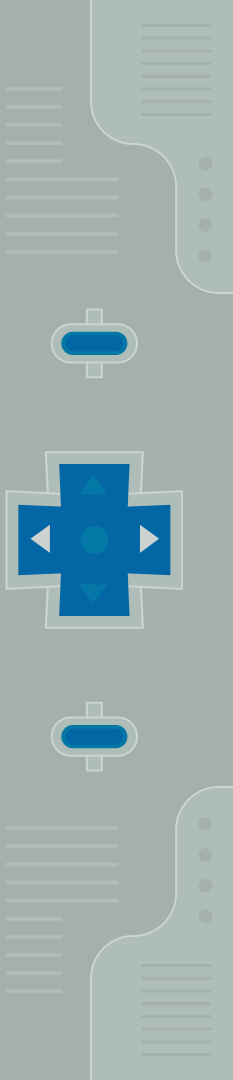

Turdle is a combination of the words “Turtle” + “Wordle” and is turtle themed because Chang has an obsession with turtles.

—SEVERAL FRIENDS

“What did you break
this time Reema”

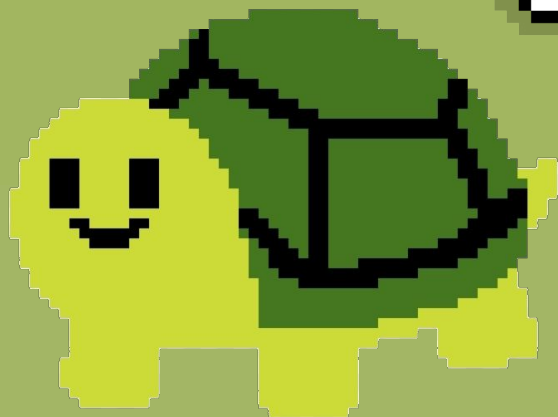

—MR. FULK

Mr. Fulk after him and Mr. Kwong spent almost an hour trying to fix Reema’s VS Code after it completely broke.

@TURDLE

THANKS FOR
LISTENING :D
